USER SECURITY SETTINGS

- · Access advanced user settings in the Company page. Only SuperUsers will have access to customize this.
- Modify to adapt password rules to fit your company's needs.

Editing Security Settings

- To edit your company's login security settings for <u>all users</u>, go to the Company page and click on **...Options** -> **Security Settings**
- Modify password complexity rules.
 - Specify minimum character limits.
 - Set maximum failed login attempts
 - When met, user status is set to "inactive" and a SuperUser must update the status to "active" for that user to regain portal access.
 - Add conditions for complexity (include upper/lower case characters, numbers or symbols).
- Toggle Google two-factor authentication ON/OFF for all users that have selected to have this on.
- To save your changes*, click on Save Changes

The selected settings will be applied to all accounts on their next login.
